How the Hepco MCS System saves Time and Money

WELDED STEEL FRAMEWORK

350 minutes

MCS MACHINE CONSTRUCTION SYSTEM

100 minutes

Introduction

The **HepcoMotion MCS** System offers an extensive range of aluminium profile sections plus all the connecting elements and accessories the designer could need. These modular components allow an almost infinite possibility of frames to be constructed for use in industrial machinery, guarding, storage and display applications.

The latest addition to the product range is **Hepco's MFS** – Machine Fencing System (see page 35). Fully compatible with the MCS ranges it provides economical barriers around machine installations such as gantries, pick and place equipment, floor mounted robot systems or any areas where the exclusion of personnel is required.

Profile machining and frame assembly to customer's drawings is carried out by Hepco with fast deliveries. Alternatively, specific cut or random lengths can be supplied to customers enabling construction of their own system. Frame design and specification is aided by the use of the **MCS CAD 3D** files, available in .dwg and .dxf formats.

Aluminium profiles are manufactured from Al6063-T5 to very close tolerances, and clear coat anodised to a depth of 10 microns, ensuring that frames are both accurate and resistant to scratching or corrosion. All manufacture is covered by full ISO 9001 certification.

The MCS System is particularly effective at replacing traditional welded steel structures at lower overall cost due to the massive time saving involved. Flexibility is increased compared to welded structures, since all elements are re-usable and additions can easily be made to existing designs at any time. Many of the brackets and connecting elements in the MCS System can be used with no machining involved, for maximum simplicity.

Hepco's extensive range of linear systems can also be mounted directly onto the MCS Profile sections and can be pre assembled in our factory to ensure parallelism. Additional accessories including sliding door systems, locks, etc., are available on request.

A full range of polycarbonate panels, clear and coloured, compressed foam panels in various colours as well as welded wire mesh panels – self coloured or powder coated – are available to complete your framework design.

Please contact our Technical Sales Team on 01884 257000 for further details.

CAD Frame Drawings

3D Design Package

To provide our customers with a fully detailed quotation, Hepco is able to produce full MCS CAD drawings and 3D views to customer's specification and design. Its fully itemised parts list and schedule is also supplied where customers are assembling frameworks themselves.

Structural Sections

See specialist section page 41 for other profiles.

These structural aluminium profiles are precision extruded using high quality Al6063-T5 material. They are then clear-coat anodised to a thickness of 10 microns, resulting in an accurate, hard-wearing basis for all types of frame construction.

Profiles can also be specially powder coated in a range of colours.

All profiles include T-slots along their length, allowing simple insertion of T-nuts and T-bolts to attach connection brackets or accessories.

Most sizes of structural profile are available as random 5600mm lengths, with the exception of the 20x20, 20x40 and 90x90 sizes 4000mm. A fast cutting, drilling, machining and tapping service is provided by Hepco, which also includes complete frame assembly to customer's drawings. See page 53 for end machining details.

For details of 'Choosing the correct **MCS System profile** for your application' please refer to pages 48 to 49. Complete Technical details may be found on pages 44 to 53.

Accessories

Accessories

Feet see page 26 	Foot Plates see page 27 	Foundation Bracket see page 28 	Castors see page 29 	T-Slot Glazing Strip see page 30 
Panel Holder see page 30 	Panel Guide see page 30 	Cover Strip see page 31 	End Caps see page 31 	Hinge see page 32 
Handle see page 33 	Cable Clamp Block see page 34 	Panel Mounting Block see page 34 	Snap Hook see page 34 	Suspended Slide see page 34 

A extensive range of accessories for the **MCS System** provides professional frame finishing, allows sliding and hinged door hanging, suspension of work tools, adjustable feet for non-level floors, and location of glazing panels.

These components are precision formed using PVC, ABS plastic, or coated steel for a hard-wearing and aesthetically-pleasing result.

Hepco also offers a range of hard-wearing Castors to suit the **MCS Machine Construction System** – details of these are on page 29. Castors for more specialist uses can be easily sourced by Hepco – ask us for details if any of the standard range is not suitable for a particular application.

Accessories

Foot

Adjustable height with 15° of movement allows for uneven floor surfaces.

Accessories

Snap Hook

1-242-1015

Use with Suspended Slide - see right.

Suspended Slide

1-242-1014

Slides in size 10 T-slots to suspend hand tools above a work table. Generally used with Snap Hook – see left.

Panel Mounting Block

(40) 1-242-1050

(45) 1-242-1051

For direct mounting of various thickness panels. Quick 90° release allows for assembly or re-positioning of block in Profile T-slot. Simply drill 6mm Ø hole in panel to suit. Comes complete with retained M6 hexagon nut.

Panels can be fitted either side of blocks as dotted lines indicate.

Cable Clamp Block

(40) 1-242-1052

(45) 1-242-1053

For location of small cables along profile length.

Machine Fencing System

Machine Fencing System (MFS)

The **HepcoMotion MFS Machine Fencing System** compatible with our **MCS** aluminium profile product range enables cost effective barriers to be constructed around machine installations such as Gantries, Pick and Place equipment and floor mounted robot systems.

Conforming to current Industry standards this maintenance free system is easy to construct and offers a lower cost alternative to similar systems.

HepcoMotion's MFS system can be supplied as pre-assembled panels to the customer's drawings or as individual components for the customer to machine and assemble in their own workshop. Delivery is fast with all major components carried ex-stock.

We would be pleased to discuss your future requirements for standard **MFS** components as well as specific non standard items such as locks, switches and specialist panel requirements.

Machine Fencing System

End cap

End caps to close off the slot profiles and vertical profile sections.

39

Two-slot profile

Provides a mid section support either vertical or horizontal to break up large single frames and ensure maximum rigidity to the assembled mesh/panel. 38

One-slot profile

A light but very rigid section used for the main frame surround. A deep 8mm wide slot allows an extensive range of mesh and panel options to be fitted in combination with the **Panel retaining clip**. An 8mm T-slot allows further attachment of additional accessories should the need arise. 38

Mesh/Panel retaining clip detail

3mm welded mesh or 2.6mm panels

Panel retaining clip, min 3 off/metre

39

Panel retaining clip

This unique fixing clip developed by Hepco will ensure that almost all types of wire mesh sheeting or polycarbonate/steel panels which are fitted within the 8mm slot profiles are securely retained and will not rattle or vibrate. Designed for 2.6mm sheet panels and all 3mm wire mesh, the sprung feet of the clip ensure universal fitting into the profile slot and the location teeth ensure the clips cannot become dislodged. (8mm panels and 4mm wire mesh do not normally require the additional use of these clips.) The number of clips needed is dependant on the panel material being used.

Panel fixing kit

A complete kit of parts for securing the fencing panel to its vertical post support. The lower bracket with its domed location stud is fully adjustable to allow for small misalignments between the vertical posts. Two bolts at the top are all that is necessary to firmly secure the fencing panel in place no matter what size of panel is being used. The swivel action of the panel fixing kit allows panels to be laid out in at any angle not just 90 degrees. 39

Vertical post

Utilising the MCS 45 Light and 45/90 Light sections the vertical post is secured into the **Foundation Block** with standard T-Bolts and Nuts. The 45/90 Light provides additional support and rigidity where long unsupported runs are necessary, corners, returns and around door frames. The 10mm T-slot allows the panel mounting kit, hinges etc. to be speedily assembled using standard or sprung loaded T-nuts. [10/12](#)

Sliding doors

A range of sliding door movements can be incorporated into the Machine Fencing System with or without a lower support profile. This is especially useful where clear access is required through the enclosure for say forklift trucks etc. [40](#)

Connection screws

Used to secure **slot profiles** together and provide a strong and hidden 90-degree joint. [18](#)

Panel options

HepcoMotion's Machine Fencing System has been developed to allow designers to incorporate an extensive range of standard wire mesh and sheet panel options for almost any industrial situation. Panels up to 8mm thick can be fitted directly into the slot profiles. Special panels can be supplied to customers requirements.

Wire mesh

Wire mesh in Ø3mm standard welded either self-coloured or black powder coated 25mm sq, 40mm sq, 50mm sq and 75 x 13 letterbox. (Non-standard 4mm, woven and special painting is available on request.)

Polycarbonate panels

5 and 6mm in clear and coloured versions, including dense foam sheet which is ideal for fencing structures where through visibility is not a requirement.

Die cast lift off hinge

These plated hinges provide a strong and flexible method of attaching doors or windows and other movable panels within your fencing system. Available in **L/H and R/H Lift off** options as well as a **fixed** version all supplied complete with the necessary fixings to our standard vertical posts. [32](#)

Foundation Block Kit

The foundation block will accept the **45L** and **45/90L Vertical posts** and is universally handed for all mounting requirements. Supplied complete with necessary **T-Bolts and Nuts**. [39](#)

Sliding Door System

For further details please contact our Technical Sales Team.

Specialist Sections

These profiles each have a specialised purpose. They expand and enhance the application of the structural profile sections detailed earlier, and can easily be combined with the structural sections shown previously within this catalogue.

Systems requiring wood, glass or acrylic panelling together with tray and storage bin holding will all benefit from the use of these sections. Additionally, the Conduit Duct Sections are useful to tidily route electrical and pneumatic services. The sliding door system can be customised to individual requirements – please contact our Technical Sales Team for further information.

All specialist profiles are extruded from Al6063-T5 aluminium and clear-coat anodised for a high level of protection. Like the structural sections detailed previously, most of these profiles are available in 5600mm lengths - see the individual profile section for details.

Specialist Sections

Technical Details

Technical Details

This section of the catalogue contains selection information for both Structural Aluminium Profiles and Profile Connections, plus details of end machining where required.

An important factor in the selection of a structural aluminium profile is the amount of deflection which will be acceptable. This deflection gives rise to a bending stress, which must be less than the maximum allowable figure of 200N/mm^2 . A bending stress greater than this figure is likely to cause the profile to fail. In calculating the correct profile, this maximum bending stress figure should be reduced by a safety factor according to the application characteristics.

Deflection may be calculated either by using Moment of Inertia* and Section Modulus** figures in the formulas relevant to an application, or graphically by following a number of steps using the graph and nomograms provided. It should be noted, however, that the graphical method will give a more approximate deflection figure.

As shown in the Profile Connections section of this catalogue, there are a number of methods available for connecting **MCS** profiles and components together. Each of these methods has a different load-bearing ability and various advantages and disadvantages in terms of ease, speed and flexibility of use. The table on page 52 will aid the selection of connection methods based on the criteria most relevant to your application.

The end of this section shows details of how to machine **MCS** profiles to accept various connection methods. This machining can be carried out by Hepco on request - contact our Sales Department for full details.

* Moment of Inertia is the ability of a profile to withstand bending.

**Section Modulus is a ratio which allows calculation of the stress in a profile created by this bending.

Aluminium Profile

Technical Specification

Material Designation	AlMgSi0.5F25
Material Number	Al6063-T5
Minimum Tensile Strength	250N/mm ²
0.2% Proof Stress	160N/mm ²
Modulus of Elasticity	70 000N/mm ²
Coefficient of Thermal Expansion	(-50...+20°C) = 21.8×10^{-6} 1/K (+20...+100°C) = 23.8×10^{-6} 1/K
Anodizing Process	E6/EV1 Clear
Thickness of Layer	10 µm
Hardness	300 HV

Section faces are parallel within ±0.1mm

Straightness of profile –
maximum deviation of 0.3mm per 300mm

Maximum twist is 1.5mm per 2000mm

Technical Details

Deflection Calculations

Note: These deflection calculations can be replaced by referring to 'Choosing the Correct MCS system profile for your application' (pages 48 and 49), though results achieved graphically will be more approximate.

Deflection of Profile under Static Point Loading:

$$d_1 = \frac{F \times L^3}{3E \times I \times 10^4}$$

① Cantilever (Rigidly fixed one end)

$$d_2 = \frac{F \times L^3}{48E \times I \times 10^4}$$

② Simply supported

$$d_3 = \frac{F \times L^3}{192E \times I \times 10^4}$$

③ Rigidly fixed both ends

Deflection of profile under its own weight (referring to the diagrams above):

$$d_1 = \frac{9.81 \times P \times L^4}{8E \times I \times 10^7}$$

$$d_2 = \frac{5 \times 9.81 \times P \times L^4}{384E \times I \times 10^7}$$

$$d_3 = \frac{9.81 \times P \times L^4}{384E \times I \times 10^7}$$

Maximum allowable bending stress (referring to the diagrams above):

$$\max < 200 \text{ N/mm}^2$$

$$s_1 = \frac{F \times L}{W \times 10^3}$$

$$s_2 = \frac{F \times L}{4W \times 10^3}$$

$$s_3 = \frac{F \times L}{8W \times 10^3}$$

E = 70 000 N/mm² (modulus of elasticity)
L = Unsupported Length (mm)
F = Load (N)
I = Moment of Inertia (cm⁴)
D = Deflection of profile (mm)
W = Section Modulus (cm³)
P = Mass of profile (kg/m)

Choosing the correct MCS System Profile for your Application

These instructions will aid the selection of an **MCS** System profile when a point load is applied. Steps A to E refer to paths which should be followed on the diagram opposite. The paths will confirm or deny an estimate of the correct **MCS** System profile for any given application. For calculation of other loading types please refer to the relevant mechanical texts.

The diagram overleaf is a graphic representation of the deflection calculations on page 46.

It will be necessary to differentiate between the three loading types:

1. Cantilever load (rigidly fixed at one end)

2. Simply supported

3. Rigidly fixed both ends

Procedure for determining the deflection of an MCS System profile when the following details are known:

Applied load, unsupported length, and selected profile size (an estimate will need to be made of the most suitable size at this stage).

- A. Find the applied load on the Y1 axis. Draw a horizontal line from that point across the graph.
- B. Now find the unsupported length L on the X axis. From this point draw a vertical line upwards through the graph.
- C. Find the intended section Moment of Inertia on the Y2 axis (values for MCS System standard sizes are shown in the table to the right of the graph). From this point draw a second horizontal line across the graph.
- D. Draw a line through the intersection of the lines A & B, parallel to the diagonal lines running across the graph and intersect this new diagonal with line C.
- E. From the point at which line D intersects with line C, draw a vertical line up the graph; this line should cross through the relevant logarithmic scale (load type 1, 2 or 3 above). The deflection for the given loading condition can now be read from the scale.

Steps A to E may also be used in a variety of sequences, depending on the variables shown. See below:

To find the optimum MCS System profile size when maximum deflection, applied load and unsupported length are known, use the following sequence:

A < B < E < D < C

To find the maximum load for a given profile size, when maximum deflection and unsupported length are known, use:

C < E < B < D < A

To find the maximum unsupported length, for a given profile size, when maximum deflection and applied load are known, use:

C < E < A < D < B

Selection Data

Example

A static point load of 3000N is applied centrally to an **MCS** System profile which is rigidly supported both ends. The total unsupported length is 800mm. It has been estimated that a 45 x 45L profile will suffice for this application. Using the Moment of Inertia figure for this profile, steps A to E are followed in sequence. From nomogram 3 (for rigidly fixed profiles) we can see that deflection will be approximately 1mm, which is deemed to be acceptable for the application.

Aesthetic Finish	★★★★★	★	★★★★★	★★★★★	★★★★★

★★★★★ = Highest/Best

★ = Lowest/Worst

¹ 'Tolerance of Inaccuracy' refers to the time and care needed when building MCS System frames with the various connection methods. For example, Angle Brackets will tolerate low build accuracy, which is quickly and cheaply achieved, whereas Bolt Connectors will not.

² 'Cost effectiveness' is a measure not only of component costs, but also takes into account the time required to build various connection methods into MCS System frames.

Assembly Hints

Vertical Profiles should run unbroken from the bottom to the top of a frame, with horizontal profiles assembled to the vertical.

Always support the joint when profiles are butt-fastened.

MCS Profiles with Linear Guides

Hepco GV3 & SL2 Slide Systems mounted to MCS Profiles

MCS aluminium profiles are available fitted with **Hepco Linear Slide Systems** as complete ready to install units incorporating either carbon chrome **GV3** slides or **SL2** stainless steel slides. Slides with independent fixings are available for customers preferring self assembly.

The proven Hepco 'V' slide principle, with its one piece edge hardened steel slideway, is the ideal choice for motion guidance in frame construction systems.

Hepco Slide Systems are suitable for running with or without lubrication. Higher loads and longer life can be achieved if lubricated and various devices are available for this purpose. Customers may choose from a number of carriage lengths to provide various sizes of platform for mounting. Carriage plates are constructed in aluminium to minimise inertia.

Benefits

- High load capacity with long life
- Quiet friction-free motion
- Easy to install and adjust
- Works in any plane
- Accepts load in all directions
- Tolerant of debris
- Tolerant of misalignment
- Little or no maintenance

GV3 6 types of carriage cater for most design requirements and 3 grades of slide precision allows selection according to cost/performance requirements. Numerous sizes and options makes this the most versatile slide system available.

SL2 is available in basic GV3 standard carriage format, with fine ground surface finish of stainless steel components for maximum corrosion resistance. Aluminium carriage with U.S.D.A approved surface treatment provides corrosion resistance better than most stainless steels.

Request the **GV3+SL2** catalogue (01884 257000) or download from the HepcoMotion website: www.HepcoMotion.com

Profiles with Linear Guides

Method of attaching Slides to MCS Profiles

The method of fixing provides location of spacer slide and retention of fixing screw position in the event of disassembly.

Selection Procedure

The information in this catalogue facilitates initial selection of the slide system and provides details of compatibility with MCS profiles. For comprehensive information, full load/life details and some ordering references, it will be necessary to also refer to the GV3 and SL2 catalogues.

Stage 1

Select the type of carriage required from the various options illustrated on pages 56 and 57. Note the Slide types, Slide precision grades, Bearing types and Lubrication Devices generally available for each carriage type.

Stage 2

(Spacer Slides Ref. pages 58 & 59; Flat slides Ref. pages 60 & 61):

Select the MCS profile required and choose a compatible slide taking account of the slide and bearing type for the chosen carriage, system dimensions, load requirements and specific availability of various options.

Stage 3

Refer to ordering details on page 62.

Profiles with Linear Guides

Carriage Types

STANDARD CARRIAGE

The popular choice for general applications

SLIMLINE CARRIAGE

For compact system height, lower cost and lower loads

REMOVABLE CARRIAGE

For direct disengagement of carriage from slide

Carriage Types

SINGLE EDGE SLIDE CARRIAGE

(customer to construct)
For wide system stability,
centre space for drive
facility and increased
moment load capacity

BELT DRIVEN CARRIAGE

Complete with belt
tension adjustment
facility and
removable top
plate to aid
customising.
For low cost drive
facility with high
speed capability.

RACK DRIVEN CARRIAGE

Complete with Pinion,
Drive Flange with
micro-adjustment facility,
and Gearbox.
(AC Motor and Speed
Controller, optional.)
A complete drive package
capable of high transmission
forces and good resolution
over long lengths

Profiles with Linear Guides

Spacer Slides with MCS Profiles

Notes:

- (1) Slide lengths are available to customers' requirements up to 3956mm. Unlimited lengths can be achieved by butting.
- (2) Hepco Rack Driven Carriage not available, but customers may construct their own using GV3 Pinion **GV3** **P45**.
- (3) Carriage Plate to be constructed by customer.
- (4) Rack Driven Carriage is offset in relation to centre of slide. Length and configuration is to customers requirements **GV3** **P49**.
- (5) All types of carriage with the exception of some sizes of Rack and Belt driven carriages (see table) are available to suit all sizes of double edge GV3 spacer slides.
- (6) NM76 & NL76 spacer slides can only be attached to the two centre most positions of the 160mm wide face of the 80 x 160 profile.
- (7) Cap seals/cap wipers are not available for the shortest length carriages. Belt Driven Carriages are available in 2 lengths only **GV3** **P46-47**.

Slide hole centres and fixing screw sizes and types may vary from those specified in the GV3 & SL2 catalogues. There may also be additional and redundant holes.

Profiles with Linear Guides

Flat Slides with MCS Profiles

Notes:

- (1) Cap seals/cap wipers are not available for the shortest length carriages. Belt Driven Carriages are available in 2 lengths only **GV3** **P46-47**.
- (2) Standard, Slimline and Removable Carriages are available to suit all sizes of GV3 Flat slides. Some sizes of slide are also available to suit Belt Driven Carriages (see table). On special application, Flat Slides can be fitted with mounted Rack and supplied with Rack Driven Carriages.
- (3) Slide lengths are available to customers' requirements up to 3956mm. Unlimited lengths can be achieved by butting.
- (4) The counterbored screw fixing option with low head socket cap screws DIN 6912 will be supplied for double row slide fixing when used with slimline carriage.

Ordering Details

1x - AU4434 - L180 - CS - DR = Carriage reference (example only). Please specify from GV3 or SL2 catalogue according to following procedure:

Carriage identification (GV3):

1. Refer to tables on relevant Carriage page of GV3 catalogue (Standard Carriage, Removable Carriage, Slimline Carriage, Belt Driven Carriage or Rack Driven Carriage).
N.B The Single Edge Slide Carriage is for construction by the customer, therefore individual Bearings and Lubrication Devices etc. must be selected from the GV3 catalogue.
2. Read off the basic carriage part number in column 1, adjacent to the chosen slide part number in column 2.
3. Determine the full carriage part number to include the options required by following the Ordering Details below the table.

Carriage Identification (SL2):

1. Refer to the table on Assembled Systems (see page 9 of the SL2 catalogue).
2. Identify the basic carriage part number in column 1 according to the chosen slide part number. The slide part number is the last five letters / numbers of the carriage part number.
3. Determine the full carriage part number to include the options required by following the Ordering Details below the table.

Hepco Powerslide 2 supported on MCS Profile Beams

Request the MCS/HPS catalogue & Mounting document (01884 257000) or download from the HepcoMotion website: www.HepcoMotion.com

High-speed, maintenance free performance are the key benefits of **Hepco's Powerslide 2**, with ex-stock availability and standard lengths up to 6m.

The **HPS** range of pneumatic linear systems is based around an extruded aluminium cylinder ideal for mounting to **MCS**. With the optional addition of **Hepco SH** shock absorbers high speed, long life systems can be achieved.

Mounting to **MCS** profiles whether by the end caps or tailored connectors could not be easier. For further details please contact Hepco's Technical Sales Team.

Benefits

- Self supporting • Long life • 10 size combinations • High load • Easy installation
- Corrosion resistant options

Hepco Driven Linear System supported on MCS profile beams

Request the MCS/DLS catalogue & Mounting document (01884 257000) or download from the HepcoMotion website: www.HepcoMotion.com

New fixing options are available in the **MCS** range allowing specifiers to take advantage of the ready to mount high speed Driven Linear System.

Ideal for simple linear or multi-axis systems, **DLS** incorporates all of the Hepco V-guide benefits of zero maintenance and environmental tolerance, but combines them with a robust belt drive producing speeds of up to 6m/s and standard lengths up to 8m.

A range of mounting options are available to enable easy connection to **MCS** profiles which, due to their interchangeability with other profiles, makes this the ideal system for retro-fitting machine elements.

Benefits

- Long system life • Low maintenance • High speed • Quiet operation
- Easy secondary machining • Robust AC motor system

Hepco HTS Telescopic Ball Bearing Slides mounted to MCS profiles

Hepco HTS telescopic ball bearing slides are manufactured under strict quality control conditions backed by ISO 9002 certification using the highest quality materials and up to date manufacturing processes. These high quality slides are quiet, rigid under extended loads and due to the superior construction offer excellent smooth motion and low friction characteristics across the complete travel length.

Hepco's Telescopic slides are an ideal partner with **MCS** aluminium profile sections enabling simple yet rigid drawers, printer tables, circuit board packs etc to be designed into any Hepco **MCS** frame available. Mounting of the slides is simple utilising Hepco's range of anti rotation T-Nuts.

Features and Benefits

- 5 basic ranges from light to heavy duty up to 280kg/pair
- Range of options available, lock out, lever disconnect etc.
- Standard ranges available from stock
- Rigid member ball bearing slide structure maintains smooth motion over entire travel
- High static capacity from rigid structure with minimal deflection
- Quality cold rolled steel members with slotted mounting holes for quick installation
- Exceptional accuracy from precision pressed slide rails
- 3 member slide series for higher capacity in narrow space
